                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ω
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 11, Application US/08751359
Patent No. 6143559
GENERAL INFORMATION:
APPLICANT: Michael, Nancy M
APPLICANT: Accavitti, Marianne
APPLICANT: Thompson, Craig B
TITLE OF INVENTION: METHODS FOR THE PRODUCTION OF CHICKEN
TITLE OF INVENTION: MONOCLONAL ANTIBODIES
NUMBER OF SEQUENCES: 25
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Score 48; DB 1; Length 350;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Description

rheumatoid arthritis, and ocular disorders comprises a kininogen domain
                                                                                                                                                                                                                                                                                                                                                                                                                                  Domain 3; human; kininogen; heavy chain; low molecular weight; plasma; trypsin; platelet; activation; granule contents; hemostasis; thrombin; tissue plasminogen activator; thrombosis; inflammatory response; endothelial cell; von Willebrand factor;
                                                 The present sequence is that of a D3 peptide derived from human high mol.wt. kininogen (HK) domain 3 (see AAY95426). The D3 peptide inhibits endothelial cell proliferation and thus possesses anti-angiogenic activity. It is an example of D3 peptides of the invention (see AAY95405-26) that are analogues of certain sites in the HK domain 3, in this case amino acid residues Asn275-Lys283. The peptides inhibit endothelial cell proliferation and may also induce endothelial cell apoptosis. Compositions including the peptides are used in claimed methods for inhibiting anglogenesis, inhibiting endothelial cell proliferation, and inducing endothelial cell proliferation, and inducing endothelial cell proliferation, and inducing endothelial cell apoptosis. Cancer, rheumatchid arthritis, and ocular disorders characterized by undesired vascularization of the retina are treated.

The inhibition involves an interaction between legumain and a papain-non-reactive site of cystatin. Legumain (EC 3.4.22.34) is a cysteine endopeptidase, and performs a protein-processing function. The present sequence is human kininogen D3, which was used in the present invention. Kininogen is a
The sequence given represents domain 3, amino acids 246-362, of the human kiningen heavy chain. Domain 3 was isolated from low molecular weight kiningen, derived from human plasma, by cleavage with trypsin. Domain 3 peptide inhibits platelet activation causing a marked decrease in the platelets ability to aggregate and secrete their granule contents. The granule contents comprise proteins which participate in hemostasis, thrombosis and the inflammatory response. Domain 3 also inhibits endothelial cell activation shown by a decrease in secretion of endothelial cell contents such as tissue plasminogen activator and von Willebrand factor. Domain 3 functions to inhibit cell activation by blocking thrombin binding to its target cells, the peptide is a selective inhibitor of thrombin-induced platlet
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               by

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymeratase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The compinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in chagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and and can on orid sequences. ABGOOID-ABG30377 represent novel human cald sequences and for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the vipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 useful in of mutations

The invention provides peptides (see AAY95405-24) that are analogues of certain sites in the HK domain 3, specifically Aan275-Lys282, cys246-cys249, Leu331-Tyr338 and Tyr299-Ser314. The peptides, in which native cys residues may be replaced by Ala residues, inhibit endothelial cell proliferation and may also induce endothelial cell apoptosis. Compositions including the peptides are used in claimed methods for inhibiting anglogenesis, inhibiting endothelial cell proliferation, and inducting endothelial cell apoptosis. Cancer, rheumatoid arthritis, and ocular disorders characterized by undesired vascularization of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

The inventor claims to isolated polymuciacule (1) and the inventor fracts: (1) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The and gene mapping, and in recombinant production of (II) the control of claims are also used in recombinant production of (II). The control or dentifying expressed genes. (1) is useful in gene therapy techniques for restore normal activity of (II) or to treat disease states involving (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in adaptostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and and no produce other types of data and products dependent on DNA and diagnostic amino acid sequences of the invention.

Sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                      Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to isolated polynucleotide (I) and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pred. No. 4.7e-13;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   95.0%; Score 153; DB 22;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AX B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, common and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynuclectide sequences have applications in disorders incombine for generations of the sequences. ABG00010-ABG30377 represent novel human and angone other trypes of data and products dependent on DNA and amino acid sequences of the invention.

Commino acid sequence data for this patent did not appear in the printed sequences the invention.

Note: The sequence data for this patent did not appear in the printed set fitp. Wipo. int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                     Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0;

```
Bradykinin is a peptide consisting of nine amino acids. It has the biological effect of decreasing blood pressure. Although kininogen is known as a protein-precursor of bradykinin, its structure is unknown because of the difficulty in collecting large enough samples of kininogen for structural investigation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          c-Dna fragment of protein precursor - used to code bradykinin

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           polymerase chain reaction (FDR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The and gene mapping, and in recombinant production of (II). The and gene mapping, and in recombinant production of (II). The polymerase chain reaction (FDR) primers, oligomers, and for chromosome polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) as useful in generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical anguing of sites expressing (II). (I) and (II) are useful in medical clasorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in chapmostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNR and and to produce other types of data and products dependent on DNR and and canno acid sequences. ABGOOLO-BAG3377 represent novel human cald sequences and for this patent did not appear in the printed specification, but was obtained in electronic format directly from NIPO at ftp. vipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess

                                                                                                                                                                                                                                                                                                                                                                                        Inhibition; thrombin-induced platelet; prevention; platelet aggregation; ADP-induced activation.
                                                                                           Bradykinin is a peptide consisting of nine amino acids. It has the biological effect of decreasing blood pressure. Although kininogen is known as a protein-precursor of bradykinin, its structure is unknown because of the difficulty in collecting large enough samples of kininogen for structural investigation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Administration of a peptide or multimer related to bradykinin or other disclosed peptides and multimers can be used for the inhibition of thrombin-induced platelets or other cells. They can also be used for preventing platelet aggregation, or inhibiting ADP-induced activation. This is useful to prevent arterial occlusions arising from coronary thrombosis and stroke.
                                                                                                                                                                                                               Gaps

The D3 peptide inhibits endothelial cell proliferation and thus possesses anti-angiogenic activity. It is an example of D3 peptides of the invention (see AAV55405-26) that are analogues of certain sites in the HK domain 3, in this case amino acid residues ABAT5-Lys282. The PEPTIGES inhibit endothelial cell proliferation and may also induce endothelial cell apoptosis. Compositions including the peptides are used in claimed methods for inhibiting angiogenesis, inhibiting endothelial cell proliferation, and inducing endothelial cell apoptosis. Cancer, rheumatoid arthritis, and ocular disorders call apoptosis. Cancer, rheumatoid arthritis, and ocular disorders characterized by undesired vascularization of the retina are treated. The IC50 value for the present peptide was less than 0.8 um for inhibition of fibroblast growth factor-induced HUVEC cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Composition for inhibiting angiogenesis and endothelial cell proliferation, inducing endothelial cell apoptosis and treating cancer, rheumatoid arthritis, and ocular disorders comprises a kininogen domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

The specification describes a method for identifying a peptide having a particular function. The method comprises preparing a database of polynucleotides and polypeptides of unknown functions, screening the database for a combination of nucleotides or amino acids indicative of the peptide with a particular function, and identifying polynucleotides and proteins which contain the peptide. The method is used to identify precursor peptides with an amidated C-terminus, especially polypeptide hormones, for studying physiologically active substances. The present sequence represents a peptide which was identified using the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Identifying peptide with selected function, useful particularly for C-amidated hormones, by screening database for combination of nucleic acid and amino acid sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         carcinoma cell; IMC-HAl; cancer; metastasis; CMAP; inhibitor; metastasis associated protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is that of a D3 peptide derived from human high mol.wt. kininogen (HK) domain 3 (see AAY59426). The D3 peptide inhibits endothelial cell proliferation and thus possesses anti-anglogenic activity. It is an example of D3 peptides of the invention (see AAY59405-26) that are analogues of certain sites in the HK domain 3, in this case amino acid residues ABAD75-Lys282. The peptides inhibit endothelial cell proliferation and may also induce endothelial cell apoptosis. Compositions including the peptides are used in claimed methods for inhibiting anglogenesis, inhibiting endothelial cell proliferation, and inducing endothelial cell apoptosis. Cancer, rheumatoid arthritis, and ocular disorders characterized by undesired vascularization of the retina are treated. The ICSO value for the present peptide was less than 0.8 um for inhibition of fibroblast growth factor-induced HUVEC cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Composition for inhibiting angiogenesis and endothelial cell proliferation, inducing endothelial cell apoptosis and treating cancer, rheumatoid arthritis, and ocular disorders comprises a kininogen domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

The present invention provides gene sequences associated with cancer metastasis which are isolated from mouse IMC carcinoma cells by detection of their higher expression in IMC-HM cell lines than in IMC-LM cell lines using differential display of the mRNA in these cells. The gene sequences can be used for the screening of potential inhibitors of cancer metastasis by either: bringing into contact with the cancer metastasis associated protein (CMAP) and determining the degree of binding; or creating a transformant cell line which expresses CMAP and measuring the degree of expression of CMAP using an antibody recognising the protein, either in the protein of CMAP using an antibody recognising inhibitor. IMC-HM cells transformed with antisense CMAP bNA show a lowered ability to metastasise. The present sequence represents a specifically claimed protein sequence from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Protein associated with cancer metastasis and gene encoding it useful for screening for potential inhibitors of cancer metastasis % \left( 1\right) =\left\{ 1\right\} =
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 1; Page 39-40; 74pp; Japanese.

Sequence 14, Application US/08622277A

Sequence 14, Application US/08622277A

Patent No. 6001580

GENERAL INFORMATION:
APPLICANT: Tani, Akiyoshi
APPLICANT: Ichimori, Yuzo
TITLE OF INVENTION: Method For Assaying MAP Kinase
NUMBER OF SEQUENCES: 18
CORRESPONDENCE ADDRESS:
ADDRESSEE: Finnegan, Henderson, Farabow, Garrett & ADDRESSEE: Funner
STREET: 1300 I Street, N.W., Suite 700
CITY: Washington
STATE: D.C.
COUNTRY: USA
ZIP: 20005-3315

Patent No. 6162613

GENERAL INFORMATION:
APPLICANT: Su, Michael Shin-San
APPLICANT: Wilson, Reith Phillip
APPLICANT: Germann, Ursula A.
TITLE OF INVENTION: Methods For Designing Inhibitors of
TITLE OF INVENTION: Serine/Thereonine Kinases and Tyrosine Kinase
NUMBER OF SEQUENCES: 37
CORRESPONDENCE ADDRESS:
ADDRESSE: Fish & Neave
STREET: 1251 Avenue of the Americas
CITY: New York
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Fed. Proc. 27, 52-57, 1968
A.Title: Structural features of plasma kinins and kininogens.
A.Reference number: A91455; MUID:90255622
A.Contents: annotation; bradykinin
A.Contents: annotation; bradykinin
C.Comment: The HWW kininogen procursor and the LMW form are produced from the same gene C.Comment: Kininogen is a cysteine proteinase inhibitor, takes part in initiation of the C.Comment: The glycine/histidine/lysine-rich region of HWW kininogen light chain is import comment: Bradykinin, released from kininogen by kallikrein, is a potent vasodilator, i xyproline residue is present in the kininogen prior to the release of bradykinin.
                                                                                                                                                                                                                                                                                                                                                                                                                  A;Molecule type: protein

Proc. Nati. Acad. Sci. U. S.A. 80, 90-94, 1983
A.Title: Primary structures of bovine liver low molecular weight kininogen precursors A.R.Ccession: A01284
A; Molecule type: mRNA
A; Reference number: A93984; MUID: 83117859
A.A.Ccession: A01284
A; Molecule type: mRNA
A; Residerences: GB: V00427; GB: J00011; NID: 9489; PIDN: CAA23710.1; PID: 9490
C.; Comment: The LWM kininogen proteinase inhibitor, takes part in initiation of C; Comment: Rininogen is a cysteine proteinase inhibitor, takes part in initiation of C; Comment: Rininogen is a cysteine proteinase inhibitor, takes part in initiation of C; Comment: Rininogen is a cysteine proteinase inhibitor, cysteine proteinase inhibitor; cysteine proteinase inhibitor; cystein homology comparison; cystein homol
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nationgen, HWW II precursor - bovine
Natternate names: alpha-2-thiol proteinase inhibitor; preprokininogen
N.Alternate names: alpha-2-thiol proteinase inhibitor; preprokininogen
N;Contains: bradykinin (kallidin); kininogen I; kininogen II; prokininogen
C;Species: Bos primigenius taurus (cattle)
C;Date: 14-Nov-1983 #sequence_revision 14-Nov-1983 #text_change 22-Jun-1999
C;Accession: A01282; A91941; A91938; B29559

ö

```
kininogen, LAW I precursor - bovine
N;Alternate names: alpha-2-thiol proteinase inhibitor; preprokininogen
N;Contains: bradykinin (kallidin); kininogen I; kininogen II; prokininogen
C;Species: Bos primigenius taurus (cattle)
C;Species: 14-Nov-1983 #sequence_revision 14-Nov-1983 #text_change 22-Jun-1999
                                                                                                                                                            C;Species: Rattus norvegicus (Norway rat)
C;Date: 20-Jun-1989 #sequence_revision 20-Jun-1989 #text_change 15-Nov-1996
                                                                                                                                                                                                                                                                                                    R;Furuto-Kato, S.; Matsumoto, A.; Kitamura, N.; Nakanishi, S.

C;Comment: The LMW kininogen precursor is produced from the same gene as the HMW form
C;Comment: Bradykinin is a cysteine proteinase inhibitor, takes part in initiation of
C;Comment: Bradykinin, released from kininogen by kallikrein, is a potent vasodilator
xyproline residue is present in the kininogen prior to the release of bradykinin.

-!- FUNCTION: (1) KININOGENS ARE INIBITORS OF THIOL PROTEASES; (2)
LAWA-KININOGEN INHIBITS THE AGEREGATION OF THROMBOCYTES; (3) THE
ACTIVE PEPTIDE KALLIDIN THAT IS RELEASED FROM LAWA-KININOGEN SHOWS
A VARLETY OF PHYSIOLOGICAL EFFECTS: (3A) INFLUENCE IN SMOOTH
MUSCLE COMPRACTION, (3B) INDUCTION OF HYPOTENSION, (3C)
NATRIURESIS AND DIURESIS (KIDDRY).
                                                                                                                                                                                                                  SUBCELLULAR LOCATION: Extracellular.

PALERNATIVE PRODUCTS: HWW II AND LAW II KININGEN PRECURSORS ARE PRODUCED FROM THE SAME GENE AS THE RESULT OF ALTERNATE MRNA SPLICING. THE SEQUENCES OF BOTH KININGENS ARE IDENTICAL UP TO RESIDUE 398.
                                                                                                                                                                                                                                                                                            -1- TISSUE SPECIFICITY: PLASMA.
-1- PTM: BRADYKININ IS RELEASED FROM KININOGEN BY PLASMA KALLIKREIN.
-1- MISCELLANEOUS: LMW-KININOGEN IS IN CONTRAST TO HMW-KININOGEN NOT
